The IEA Data Repository

Our data repository offers data and documentation files from a number of completed IEA studies. These studies include CIVED, ICCS 2009, ICILS 2013, PIRLS (2001, 2006, 2011), prePIRLS 2011, the Reading Literacy Study (for countries that administered the test in both 1991 and 2001), TEDS-M, SITES (Module 1, 2006), TIMSS (1995, 1999, 2003, 2007, 2011), and TIMSS Advanced (1995, 2008). Data from ongoing studies are added to our repository after the release of the respective international databases.

Please click [here](#) to log in and gain access to our data.

Software for IEA data

We currently offer two software applications that will allow you to analyze, view, and explore data from our studies. They are the IDB Analyzer and the Data Visualizer. You can also access data through the National Center for Education Statistics (NCES) International Data Explorer. Select the software you prefer and obtain the data you need.

IDB Analyzer

Allows you to combine and analyze data from different countries and select specific subsets of variables. It creates SPSS code.
